PROJECTS

Placement Tracker Dashboard | Next.js, TypeScript, CSS, Vercel

[Link](#) | July 2025

- Designed and developed a comprehensive **placement tracking dashboard** for students and administrators, improving visibility of placement KPIs.
- Implemented dynamic charts and real-time progress tracking using interactive UI components to visualise student placement journeys.
- Created separate **admin and student views** with role-based access control to ensure data privacy and secure operations.
- Integrated authentication and data management workflows, enabling seamless sign-in, profile updates and placement record maintenance.
- Deployed the application on **Vercel**, ensuring fast global delivery and automated continuous deployment.

Smart Waste Classification | Python, TensorFlow, OpenCV, Flask, HTML/CSS.

[Link](#) | Nov 2025

- Developed an automated **waste classification system** using a CNN model to categorize waste into recyclable and non-recyclable types with high accuracy.
- Built a **real-time image processing pipeline** using OpenCV, enabling efficient object detection from live camera feeds.
- Deployed the trained model using **Flask**, providing a responsive web interface for user interaction and waste type prediction.
- Optimized model performance through **data augmentation and hyperparameter tuning**, achieving faster inference and reliable predictions.
